

CPI PACIFICA COLOR CHEAT SHEET

Below is a list of manufacturer-recommended standard color pairs for CPI Pacifica composite floor coverings. These are the same colors used to make CPI Pacifica 200 and 300 hard samples.

When making color selections, keep in mind that the base coat color will influence the finished look of the floor. For example:

- Blue base coat + Onyx Pearl broadcast = finish may have a bluish tint
- Red base coat + Onyx Pearl broadcast = finish may appear pink or red

No matter the colors selected, a test should always be completed on site. Things like lighting and application technique can also influence the look of a finished floor.

CPI Pacifica 200
